

Phase 3 - Class 12 Restricted Category Aircraft**FAR 91.313**

Note: Restricted Category Aircraft include war birds, crop dusters, fire fighters, etc. The restrictions are mostly common sense. Air shows usually have waivers for their operation.

1. Where should restricted aircraft not be operated?

Phase 3 - Class 12 Experimental Category Aircraft**FAR 91.319**

Note: There are thousands of Experimental Aircraft that are managed under a different set of rules from Certificated Aircraft. They are built under exacting standards and inspections. They must be identified as "Experimental" which is the primary purpose of this regulation. Some of the noted restrictions are often removed by blanket waiver for given models (such as the RV) once they have met the construction standards and have sufficient experience in that model.

1. Can experimental aircraft be used to carry cargo for hire?
2. In what areas are experimental aircraft restricted from flying?
