

**The following FARs will NOT be covered in class.**

**Phase 3 - Class 9 Class A Airspace Operations**

**91.135, 91.215**

**Notes:** Class A airspace is from 18,000 ft MSL up to 60,000 ft MSL. It covers the entire United States and extends 12 miles out to sea.

In order to fly up there you must be on an IFR flight plan with an ATC clearance. You must have 2 way communication with ATC on a frequency they assign. You must have a transponder with altitude encoding capabilities. There are various exception waivers you do not need to be concerned with at this point.

**Phase 3 - Class 9 Inspection of Airman Certificate**

**FAR 61.3[I]**

**Note:** This TSA version is not in the FAR/AIM book - Essentially, if TSA asks to see your pilot certificate you must show it to them.
